

MoonCunt

Charitable Unruggable Networking Token \$CUNT

Whitepaper v1.0.0

In this document I will explain how we came to be, and how a community came together to create a project of philanthropy in the face of censorship in a decentralised community. I will outline our future intentions of how we intend to keep this project alive and engaging through the power of democratic voting.

CUNT is a deflationary token on the Binance Smart Chain

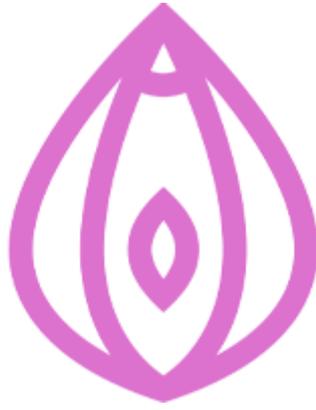

Introduction

On Thursday the 22nd of April a token was created on the Binance Smart Chain with the ticker CUNT. This was originally just for a laugh, with no clear direction but soon people started buying on PancakeSwap and the chaos soon spiralled out of control.

This can all be seen here <https://www.youtube.com/watch?v=RGWejnitglo>

By Saturday the 24th of April, it became apparent that people were throwing their money in to CUNT so the founder decided to post a poll on <https://t.me/MoonCuntANN/58> asking if holders would forego a bonus paid in CUNT in favour of donating to a cervical cancer charities.

The answer was an overwhelming yes, and now we begin a journey in the face of censorship, social behaviour and philanthropy.

Should we support a cervical cancer charity with the allocation of the 100% bonus?

Anonymous Poll

96% Yes

4% No

This story may not have a happy ending, or maybe it will. The founding dev has burned all dev LP valued at \$500k at the time of doing so, and approximately \$6 trillion worth of \$CUNT when the holder count reached 5,000 on www.bscscan.com

This is now in the hands of the community, and in this paper I will explain the proposal to keep this project alive through the power of MEME's, smart contracts and deflationary tokenomics.

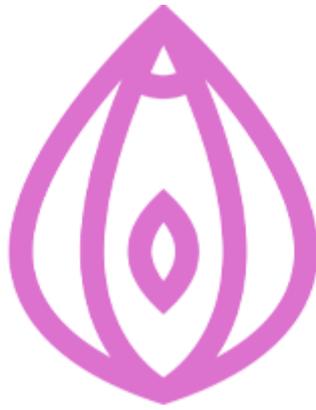

C is for Charitable

Given our controversial name, it is clear that mainstream media, social media shadow banning and acceptance in the crypto community will only come from those that have a love of the word CUNT.

Due to the nature of the blockchain this name cannot be changed, so we will use the controversy to our advantage to raise awareness for women's charities.

If you think that is offensive, then you have just proven that our cause has the required controversial edge to explode.

We have initially selected <https://www.binance.charity/> as our preferred charitable donation destination. This has been done so to due to CUNT being based on the Binance Smart Chain, allowing for transparency in transactions being performed on-chain in a single transaction.

The donations will be spread out over 10 years via our 120 month vesting smart contract that will slowly release 10% of supply in to the dev wallet found here <https://bscscan.com/token/0x5bf5a3c97dd86064a6b97432b04ddb5ffcf98331?a=0xf1abd6c3a3ffc07f37b3efd8f3e69eef2e63914a>

The vested amount will be sent to this wallet upon deployment of the smart contract, and will release it's first amount of tokens on July 1ST 2021 equal to 0.83% of the total circulating supply equal to 70m tokens.

On this date we will begin democratic voting via <http://t.me/MoonCuntTokenANN> to decide on the destination of our charitable donations and we will always favour the majority.

Charities can be suggested every month, and are not strictly limited to <http://binance.charity> however all suggested charities must be relevant to women and also be fully registered genuine charities that accept cryptocurrency.

In the event that a non-binance charity is selected or if a charity that does not expect BEP20 BNB then details of exchanges from BNB to Bitcoin or any other cryptocurrency will be posted on the official website <http://www.MoonCunt.com> as a blog for complete transparency which will include all tx hashes and where necessary even video evidence of the donation happening.

Each month tokens will be swapped in micro batches via PancakeSwap to avoid negative price impact, and then a community vote will be held once a month to vote on the destination of the BNB raised for a good cause.

This process will be the only action carried out by the founding dev. The rest of the project is in the hands of the community as explained in section **N.** of this whitepaper.

The decision to support womens based charities creates a taboo quandary.

CUNT is a word that divides many people, and much of this project is a social experiment to see if people will embrace CUNT for a good cause or not.

It is my belief that a simple word should not get in the way of a good cause, and should this happen, I believe that the controversy could fuel demand for \$CUNT, and provide longevity and a sustainable ecosystem for MoonCunt.

U is for Unruggable

98.5% of the entire LP for \$CUNT has been sent to the deadcoin address on BSCscan.com the tx's can be found here

Address 0x00dEaD

Overview

Balance: 130,734.366103430224203042 BNB

BNB Value: \$70,740,365.50 (@ \$541.10/BNB)

Token: \$4,544,185,606.36 [>108](#)

The deadcoin address lists the BEP20 tokens by order of dollar value. Once \$CUNT has a dollar value reflected on bscscan we will show up at the top of the list, above \$CAKE

This is the most famous address on bscscan and should prompt interest and intrigue from the crypto community bringing eyes to our cause

Prometheus (PROM) 750,000 PROM	\$7,316,271.24 @9.7550283250

The only threat to the liquidity of and future of MoonCunt is large holders that aped in like utter cunts the day it was launched, I mention this because this must always be a consideration before buying a token called CUNT in the first place.

Question your life decisions before buying, no one wants to hurt your investment, but this is as decentralised as it gets, so you must weigh up what CUNT is worth to yourself before investing.

Exercise a bit of common sense, but rest assured the threat from the founding dev as been fully and verifiably removed through the miracle of the blockchain.

Should you decide to ever buy \$CUNT, then pay attention to the next section, and it comes with a responsibility.

N is for Networking

The only way to keep this project alive is through the power of social networking memes. In the initial 24 hours of the tokens existence tiktok was lit up with videos broadcasting the existence of \$CUNT. Now that a solid cause has been assigned to the project, it is the responsibly of the holder community to create and post as many memes and videos as possible and spread them far and wide.

This may seem like an impossible task, but remember Rome wasn't built in a day. If you want to have fun with your investment and can commit a little bit of time spreading the good work \$CUNT is doing, then this is your moment to shine.

It's probably not a good conversation topic when your sat around the table with your Nan at Christmas dinner, but the internet is a funny place, and broadcasting the message in as many appropriate places as possible will ensure that we meet our goals.

To get started visit our Telegram group for help and support found here <http://t.me/MoonCuntToken>

Only memes can keep this alive, do your bit. Buy some \$CUNT to help a CUNT that's our goal now, and lets make this happen.

As hashtags like #MoonCunt are not appearing on some social media we ask that you use the following slogans

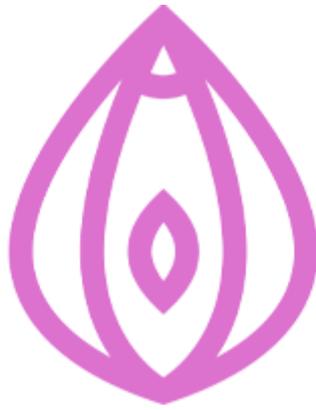

#MoonCnt all that's missing is U

And ensure you link back to our website, socials or pancakeswap listing found below

T is for Token

\$CUNT is a simple BEP20 token found here

<https://bscscan.com/token/0x5BF5a3C97DD86064A6B97432b04dDB5FfCf98331>

In this section we will further discuss the tokenomics

Initial Supply

777,777,777,777,777

Burned Supply

777,776,946,448,358.5

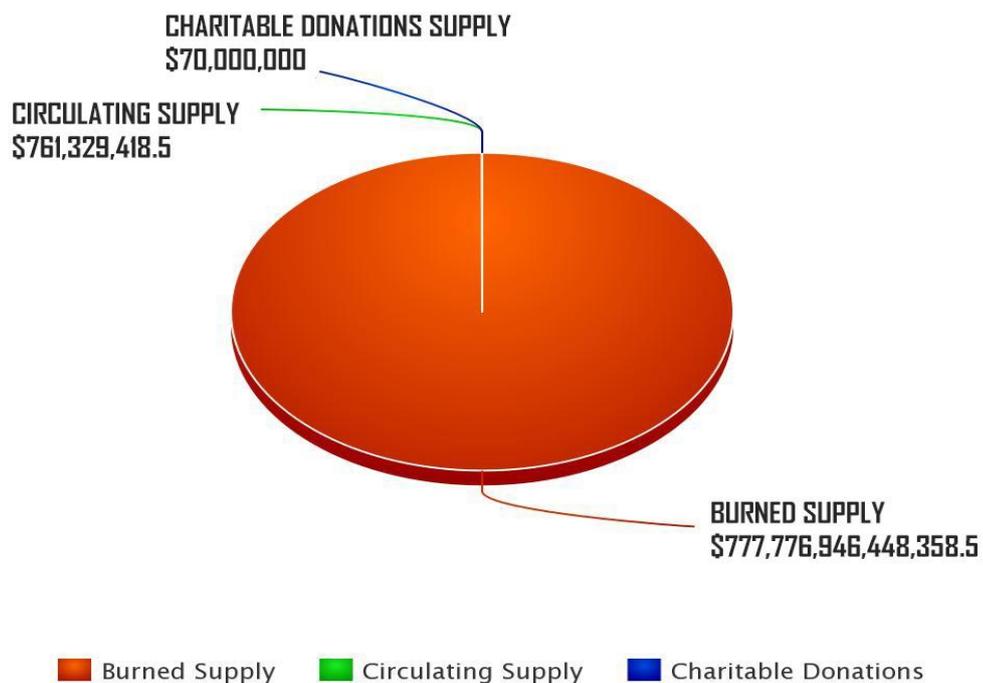

Circulating Supply

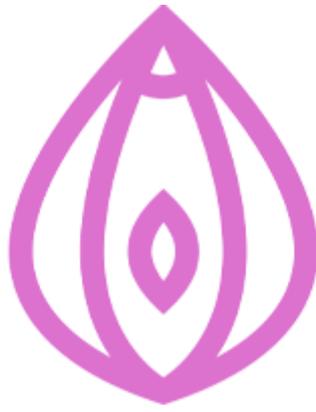

831,329,418.5

Charitable Donation Supply

70,000,000 (vested in a slow release contract over 120 months)

Approximate Market Cap at \$0.01 = \$7m ([click here for current price and marketcap](#))

Why is the supply so high?

The initial supply of 777,777,777,777,777 was created to get eyes on the project. When people see a project with a market cap in the trillions, they are surely curious. This is why the decision to burn the entire dev supply has been made.

Deflationary Supply

As explained before, the token is deflationary, with such a huge portion burned the only coins that can be bought or sold are already in the hands of those that aped in to \$CUNT in the beginning. Each time you buy or sell \$CUNT you are aiding further burning through the LP tokens held by the deadcoin burn wallet, and the charitable donation coins will be released so slowly that they could very well be on par with the rate of deflation from LP burning. Meaning the longer you hold \$CUNT the more scarce the asset becomes.

Who Owns MoonCunt?

Technically since all the LP and Dev tokens have been sent to a wallet on Binance Smart Chain, and all the fees go to that wallet, and all the charitable donations will go through Binance Charity, and is paired with Binance Coin \$BNB on pancakeswap, one could argue that in fact, Binance owns MoonCunt. I'm not sure that will help us get a listing, but if people keep buying \$CUNT which Burns \$CUNT and helps CUNTs.... Well who knows what the future holds.

The \$CUNT is in your hands now, treat it like you'd treat your own 🍊
